Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A) Title: Prediction of the coding sequences of unidentified human genes. IX. The A; Reference number: 214086; MUID:98290545

A; Retering T00260

A; Retering T00260

A; Residues: Preliminary; translated from GB/EMBL/DDBJ

A; Residues: 1-51 canso

A; Molecule type: mRNA

A; Residues: 1-51 canso

A; Molecule type: mRNA

A; Residues: L-51 canso

C; Genetics:

A; Note: KIAA0605

C; Superfamily: thrombospondin type 1 repeat homology

F; 46-106/Domain: thrombospondin type 1 repeat homology
                                                                                                                                                                                                                                                                                                                 39;

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/508,004
FILING DATE: 27-JUL-1995
CLASSIFICATION NUMBER: US/08/402,282
PRIOR APPLICATION NUMBER: US/08/402,282
FILING DATE: 10-MAR-1995
ATTORNEY/AGENT INFORMATION:
NAME: RUGIAL DOING R.
REGISTRATION NUMBER: 32,135
REFERENCE/DOCKET NUMBER: P-3283
INFORMATION FOR SEQ ID NO: 3:
SEQUENCE CHARACTERISTICS:
LENGTH: 15664 base pairs
TYRE: nucleic acid
STRANDEDNESS: double
TOPOLOGY: linear
MOLECULE TYPE: DNA (Genomic)

LOCATION: 4855..5376
OTHER INFORMATION: /function= "potential coding
OTHER INFORMATION: sequence"
OTHER INFORMATION: /product= "L5 gp37 homolog"
NAME: Fugit, Donna R.
REGISTRATION NUMBER: 32,135
REFERENCE/DOCKET NUMBER: P-3283
INFORMATION FOR SEQ ID NO: 3:
SEQUENCE CHARACTERISTICS:
LENGTH: 15664 base pairs
TYPE: nucleic acid
STRANDEDNESS: double
                                                                                                                                                                                                                     TOPOLOGY: linear
MOLECULE TYPE: DNA (genomic)
FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NAME/KEY: misc_feature

this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1257096-1258631, 1469064-1470983, and 1475592-1476743). Subtraction by Hento Soares and M. Fatima Bonaldo. " a 157 c 169 g 121 t l others

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         further details.

CDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues. First strand cDNA was primed with a primer
[5' GAGAGAGAGAGAGACTCTTTTTTTTTTTTTTTTYN 3', CDNA was
prepared by using trehalose thermo-activated reverse transcriptase
and subsequently enriched for full-length by cap-trapper. Second
strand cDNA was prepared with the primer of sequence [5'
GAGAGAGATTATTATATAATCCCCCCCCCCCCC 3']. CDNA was cleaved
with BanHI and XhoI. Vector: a modified pBluescript KS(+) after
bulk excision from Lambda FLC I. Cloning sites, 5' end: Sali; 3'

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hayashizaki,Y
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mus musculus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          house mouse.
```

```
prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by eap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5, 66A6A6A6A6CACCCCCCCCCCC], cDNA was cloned into the XhoI and BamHI sites.
Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was GAGAGAGAGAGCTITTTTTTTTTTTTTTY 3/, cDNA was
